The Rainbow (1915) revolves around three generations of the Brangwens, a strong, vigorous family, deeply involved with the land. When Tom Brangwen marries a Polish widow, Lydia Lensky, and adopts her daughter Anna as his own, he is unprepared for the conflict and passion that erupts between them. All are seeking individual fulfilment, but it is Ursula, Anna's spirited daughter, who, in search for self-knowledge, rejects the conventional role of womanhood

The Book That Launched an International Movement “An absolute must-read for parents.” –The Boston Globe “It rivals Rachel Carson’s Silent Spring.” –The Cincinnati Enquirer “I like to play indoors better ‘cause that’s where all the electrical outlets are,” reports a fourth grader. But it’s not only computers, television, and video games that are keeping kids inside. It’s also their parents’ fears of traffic, strangers, Lyme disease, and West Nile virus; their schools’ emphasis on more and more homework; their structured schedules; and their lack of access to natural areas. Local governments, neighborhood associations, and even organizations devoted to the outdoors are placing legal and regulatory constraints on many wild spaces, sometimes making natural play a crime. As children’s connections to nature diminish and the social, psychological, and spiritual implications become apparent, new research shows that nature can offer powerful therapy for such maladies as depression, obesity, and attention deficit disorder. Environment-based education dramatically improves standardized test scores and grade-point averages and develops skills in problem solving, critical thinking, and decision making. Anecdotal evidence strongly suggests that childhood experiences in nature stimulate creativity. In Last Child in the Woods, Louw talks with parents, children, teachers, scientists, religious leaders, child-development researchers, and environmentalists who recognize the threat and offer solutions. Louw shows us an alternative future, one in which parents help their kids experience the natural world more deeply—and find the joy of family connectedness in the process. Now includes A Field Guide with 100 Practical Actions We Can Take Discussion Points for Book Groups, Classrooms, and Communities Additional Notes by the Author New and Updated Research from the U.S. and Abroad Richard Louw’s new book, Our Wild Calling, is available now.

Provides techniques for achieving high scores on the AP Spanish exam and offers two sample tests with answers and explanations.

"REA: the test prep AP teachers recommend."

An engaging look at how debates over the fate of literature in our digital age are powerfully conditioned by the nineteenth century’s information revolution What happens to literature during an information revolution? How do readers and writers adapt to proliferating data and texts? These questions appear uniquely urgent today in a world of information overload, big data, and the digital humanities. But as Maurice Lee shows in Overwhelmed, these concerns are not new—they also mattered in the nineteenth century, as the rapid expansion of print created new relationships between literature and information. Exploring four key areas—reading, searching, counting, and testing—in which nineteenth-century British and American literary practices engaged developing information technologies, Overwhelmed delves into a diverse range of writings, from canonical works by Coleridge, Emerson, Charlotte Brontë, Hawthorne, and Dickens to lesser-known texts such as popular adventure novels, standardized literature tests, antiquarian journals, and early statistical literary criticism. In doing so, Lee presents a new argument: rather than being at odds, as generations of critics have viewed them, literature and information in the nineteenth century were entangled in surprisingly collaborative ways. An unexpected, historically grounded look at how a previous information age offers new ways to think about the anxieties and opportunities of our own, Overwhelmed illuminates today’s debates about the digital humanities, the crisis in the humanities, and the future of literature.

Antibiotics and antibiotic resistance have most commonly been viewed in the context of human use and effects. However, both have co-existed in nature for millennia. Recently the roles of antibiotics and antibiotic resistance genes have started to be discussed in terms of functions other than bacterial inhibition and protection. This special topic will focus on both the traditional role of antibiotics as warfare mechanisms and their alternative roles and uses within nature such as antibiotics as signals or communication mechanisms, antibiotic selection at low concentrations, the non-specific role of resistance mechanisms in nature: e.g. efflux pumps, evolution of antibiotic resistance and the role of persisters in natural antibiotic resistance.
