An adaptive user interface (also known as AUI) is a user interface (UI) which adapts, that is changes, its layout and elements to the needs of the user or context and is similarly alterable by each user. These mutually reciprocal qualities of both adapting and being adaptable are, in a true AUI, also innate to elements that comprise the interface's components; portions of the interface might adapt to and affect other portions of the interface.

Understanding the Potential of Adaptive User Interfaces

Adaptive user interfaces can change their appearance and/or interaction behaviour to match the requirements of an individual user, the used device and current context conditions. In contrast to adaptable user interfaces, which are modified by a deliberate and conscious choice of a user, adaptive user interfaces automatically initiate and perform changes according to the available knowledge about the user and context.
