Advancing the Science of Climate Change

Advancing the Science of Climate Change addresses what can be done to better understand climate change and its interactions with human and ecological systems. The book considers both the natural climate system and the human activities responsible for driving climate change and altering the vulnerability of different regions, sectors, and populations as a single system.

States the compelling case that climate change is occurring and is caused in large part by human activities is based on a strong, credible body of evidence Key report findings about changes in the climate system include: Thermometer measurements show that Earth's average surface temperature has risen substantially over the past century, and especially over the last three

Climate Signals | Advancing the Science of Climate Change

The Panel on Advancing the Science of Climate Change was charged to provide a concise overview of past, present, and future climate change, including its causes and its impacts, then recommend steps to advance our current understanding, including new observations, research

Advancing the Science of Climate Change

At the request of Congress, the National Academy of Sciences convened a series of coordinated activities to provide advice on actions and strategies the nation can take to respond to climate change. This suite of activities included a panel report on Advancing the Science of Climate Change. The report concludes that a strong, credible body of scientific evidence shows that climate change is occurring, is caused largely by human activities, and poses significant risks for a broad range of ...
