Word Problem Solving 3 Algebra Word Problems Solutions

Many students find solving algebra word problems difficult. The best way to approach word problems is to “divide and conquer”. Break the problem down into smaller bits and solve each bit at a time. First, we need to translate the word problem into equation (s) with variables. Then, we need to solve the equation (s) to find the solution (s) to the word problems.

Math Word Problems. Get help with your Math Word Problems homework. Access the answers to hundreds of Math Word Problems questions that are explained in a way that's easy for you to understand.

Math Word Problems Questions and Answers | Study.com

Below are more complicated algebra word problems Example #6: The ratio of two numbers is 5 to 1. The sum is 18. What are the two numbers? Solution Let  $x$  be the first number. Let  $y$  be the second number  $x / y = 5 / 1$   $x + y = 18$  Using  $x / y = 5 / 1$ , we get  $x = 5y$  after doing cross multiplication Replacing  $x = 5y$  into  $x + y = 18$ , we get  $5y + y = 18$   $6y = 18$   $y = 3$

Algebra Word Problems - Basic Mathematics

Find below a wide variety of hard word problems in algebra. Most tricky and tough algebra word problems are covered here. If you can solve these, you can probably solve any algebra problems. Teachers! Feel free to select from this list and give them to your students to see if they have mastered how to solve tough algebra

problems.

100 Hard Word Problems in Algebra - Basic Mathematics

$x + y = 548$  ----- (1) Given : Cost of each adult ticket is \$10 and kid ticket is \$5 and tickets were sold for a total of \$3750. So, we have.  $10x + 5y = 3750$ .  $2x + y = 750$  ----- (2) Solving (1) & (2), we get.  $x = 202$  and  $y = 346$ . So, the number of adults tickets sold is 202 and kids tickets is 346.

Algebra Word Problems Worksheet with Answers

Solution. In this problem, we are asked to find two numbers. Therefore, we must let  $x$  be one of them. Let  $x$ , then, be the first number. We are told that the other number is 12 more,  $x + 12$ . The problem states that their sum is 84:  $x + x + 12 = 84$ . The line over  $x + 12$  is a grouping symbol called a vinculum.

Word problems - A complete course in algebra

Multiplication, or  $x \times y$ . Example: if you drive 50 miles per hour, how many miles will you drive in 5 hours: 250 miles.  $y$  increased by  $x\%$ .  $y + \left( y \times \frac{x}{100} \right)$   $y$  decreased by  $x\%$ .  $y - \left( y \times \frac{x}{100} \right)$   $y$  is at least (or no less than)  $x$ .

Grade 9 Algebra Word Problems - Age Example 1: A mother is three times as old as her daughter. Six years ago, the mother's age was six times that of her daughter. How old are they now? Solution: Let  $x$  represent the daughter's age. Therefore,  $3x$  is the mother's age.  $6(x - 6) = 3x - 6$   
 $6x - 6 = 3x - 6$   
 $3x = 30$   
 $x = 10$

Grade 9 Algebra Word Problems (examples, solutions, videos)

Solving algebraic word problems requires us to combine our ability to create equations and solve them. To solve an algebraic word problem: Define a variable. Write an equation using the variable. Solve the equation. If the variable is not the answer to the word problem, use the variable to calculate the answer.

Algebraic word problems | Lesson (article) | Khan Academy

Solution If  $L$  and  $W$  be the original length and width of the rectangle and its area is given by  $L \times W$  After increase the length becomes  $2L$  and the width becomes  $3W$ . The area is then given by  $(2L) \times (3W)$  and is known. Hence  $(2L) \times (3W) = 1800$  Solve the above equation to find  $L \times W$   
 $6L \times W = 1800$

## Math Word Problems with Solutions and Explanations - Grade 8

Solve this equation by simplifying it step by step: (after brackets opening at the right side) (after moving variable terms to the right and constant terms to the left) (after combining like terms) Thus you got that Ann's present age is years. Check. If Ann's present age is 5 years, then Betty is years old now.

## Lesson Age problems and their solutions - Algebra

Algebra problems With Solutions. Example 1: Solve,  $(x-1)^2 = [4(x-4)]^2$  Solution:  $x^2 - 2x + 1 = 16(x-4)^2$   $x^2 - 2x + 1 = 16x^2 - 64x + 64$   $x^2 - 18x + 65 = 0$   $(x-13)(x-5) = 0$ . Hence,  $x = 13$  and  $x = 5$ . Algebra Problems for Class 6. In class 6, students will be introduced with an algebra concept. Here, you will learn how the unknown values are represented in terms of variables.

## Algebra Problems With Solutions | For Class 6, 7 And 8

A common setback when trying to solve algebra word problems is assuming what the question is asking before you read the entire problem. In order to be successful in solving a word problem, you need to read the whole problem in order to assess what information is provided, and what information is missing. 2 Determine what you are asked to find.

full solutions to every problem) to share his strategies for solving algebra word problems. 30 fully-solved examples serve as a guide 70 practice exercises include full solutions a quick algebra refresher reviews essential skills a chapter on strategies and tips introduces the basic concepts A variety of word topics are covered, including: age problems problems with integers relating the digits of a number fractions, decimals, and percentages average values ratios and proportions problems with money simple interest problems rate problems two moving objects mixture problems people working together problems with levers perimeter and area

Solving word problems has never been easier than with Schaum's How to Solve Word Problems in Algebra! This popular study guide shows students easy ways to solve what they struggle with most in algebra: word problems. How to Solve Word Problems in Algebra, Second Edition, is ideal for anyone who wants to master these skills. Completely updated, with contemporary language and examples, features solution methods that are easy to learn and remember, plus a self-test.

If you want to improve your Algebra word problem-solving skills, this book is filled with what you need the most: Practice! "400 Practice Algebra Word Problems (With Help and Solutions)" will make a great standalone or supplemental practice guide for you if you're serious about developing your math word problem-solving skills or raising your grades in school. It contains 400 practice word problems that will sharpen your skills at solving problems involving addition, subtraction, multiplication,

division, mixed-operations, systems of equations, mixtures, rates and time, work, and even more! It starts simple and will gradually build your skills from the ground up by presenting word problems from basic to more difficult. And in case you come upon any word problem that gives you trouble, it provides sample equations for each word problem to give you a hint or a nudge in the right direction. Solutions are also given to ensure that you will arrive at the correct answers. But that's not all. "400 Practice Algebra Word Problems (With Help and Solutions)" also contains an entire section dedicated to giving you hints, tips, and useful tricks that they don't teach you in school to help you master the hardest part about solving word problems--translating the written words into mathematical equations. And unlike other books, it won't lock you into a rigid, step-by-step solving process or force you to solve word problems in any particular way. It gives you the opportunity to practice and learn in the way that suits you best! So start practicing!

Spectrum(R) Word Problems for grade 8 includes practice for essential math skills, such as real world applications, multi-step word problems, variables, ratio and proportion, perimeter, area and volume, percents, statistics and more. Spectrum(R) Word Problems supplement to classroom work and proficiency test preparation. The series provides examples of how the math skills students learn in school apply to everyday life with challenging, multi-step word problems. It features practice with word problems that are an essential part of the Common Core State Standards. Word problem practice is provided for essential math skills, such as fractions, decimals,

percents, metric and customary measurement, graphs and probability, and preparing for algebra and more.

Become a better problem solver with SOLVING ALGEBRA WORD PROBLEMS! Designed to give you practice applying a five-step problem-solving strategy to a variety of problem types, this mathematics text provides you with the practice and support you need to succeed in math. The most common types of word problems that are encountered in elementary and intermediate algebra textbooks are included to help you become a better problem solver, build confidence, and decrease anxiety.

Provides easy-to-follow explanations of algebra word problems, examining key algebraic concepts, explaining how to break down a word problem, and including over one hundred written sample problems.

Collection of nearly 200 unusual problems dealing with congruence and parallelism, the Pythagorean theorem, circles, area relationships, Ptolemy and the cyclic quadrilateral, collinearity and concurrency and more. Arranged in order of difficulty. Detailed solutions.
