Mechanics of Machines is designed for undergraduate courses in kinematics and dynamics of machines. It covers the basic concepts of gears, gear trains, the mechanics of rigid bodies, and graphical and analytical kinematic analyses of planar mechanisms. In addition, the text describes a procedure for designing disc cam mechanisms, discusses graphical and analytical force analyses and balancing of planar mechanisms, and illustrates common methods for the synthesis of mechanisms. Each chapter concludes with a selection of problems of varying length and difficulty. SI Units and US Customary Units are employed. An appendix presents twenty-six design projects based on practical, real-world engineering situations. These may be ideally solved using Working Model software.

From the bestselling author of Blood and Money: A haunting true story of three people locked in a fierce struggle against time and the sea and each other. In July 1973, Bob Tininenko; his wife, Linda; and his brother-in-law, Jim Fisher, set sail from Tacoma, Washington, on a thirty-one-foot trimaran down the West Coast to Costa Rica. The journey was expected to take a matter of weeks, but ten days into the cruise, the party encountered a freak storm off the coast of northern California. When gale-force winds and fifty-foot waves capsized their boat, the voyage became a nightmare. For seventy-two days, the trio was lost at sea. Challenged by nature and compromised by a bitter rivalry, their courage and will to live was put to the ultimate test. Jim, the owner and skipper of the boat, was a devout fundamentalist whose recognition of God's will in every event brought him into increasing conflict with his brother-in-law. As the two men battled to take control of a dire situation, Linda kept a secret that would lead to heartrending tragedy. A [hair-raising] (Houston Chronicle) account of shipwreck and survival and a searing portrait of faith without reason, Lost! is an unforgettable true story from [a writer of tremendous power and achievement] (Detroit Free Press).

A history of the industrial and construction machines built by the International Harvester Company along with Hough and Dresser.

Those weapons have begun to stir. . . .

CRITICAL THINKING: A USER'S MANUAL offers an innovative skill-based approach to critical thinking that provides step-by-step tools for examining arguments. Users build a complete skill set by recognizing, analyzing, diagramming, and evaluating arguments. Later chapters encourage application of the basic skills to categorical, truth-functional, analogical and inductive, and causal arguments as well as fallacies. Exercises throughout the book engage readers in active learning, integrate writing as part of the critical thinking process, and emphasize skill transference. For the aficionado of farm equipment, or the scion of an old farming family nostalgic for the old days, or the grown-up boy who still loves a classic piece of old-time machinery, the vintage tractor can be a thrilling find like no other. This book tells dozens of stories of such discoveries, of the treasured old tractor parked in a shed since 1927, of the pristine model unearthed at an estate sale, of the broken-down old beauty stashed in a barn where generations of children have made their secret hideaways. These are the classic tractors that are often as hard to find as a needle in a haystack!but far more fun to discover, as all of these delightful stories make abundantly clear.
