*(Introduction) Character Theory
Of Finite Groups*

In mathematics, more specifically
in group theory, the character of
a group representation is a
function on the group that

Read Online Character Theory Of Finite Groups I

associates to each group element the trace of the corresponding matrix. The character carries the essential information about the representation in a more condensed form. Georg Frobenius initially developed representation theory of finite groups entirely

Read Online Character Theory Of Finite Groups I

based on the characters, and without any explicit matrix realization of representations themselves. This is possible because

Character theory - Wikipedia
Character theory provides a

Read Online Character Theory Of Finite Groups I

powerful tool for proving theorems about finite groups. In addition to dealing with techniques for applying characters to "pure" group theory, a large part of this book is devoted to the properties of the characters themselves and how

Read Online Character Theory Of Finite Groups I

these properties reflect and are reflected in the structure of the group.

Character Theory of Finite Groups
- ScienceDirect

Through the fundamental work of
Deligne and Lusztig in the 1970s,

Read Online Character Theory Of Finite Groups I

further developed mainly by Lusztig, the character theory of reductive groups over finite fields has grown into a rich and vast area of mathematics. It incorporates tools and methods from algebraic geometry, topology, combinatorics and

Read Online Character Theory Of Finite Groups I

computer algebra, and has since evolved substantially.

The Character Theory of Finite Groups of Lie Type

A linear representation of a finite group is a group homomorphism:
 $\rho: G \rightarrow GL(V)$. Here $GL(V)$

Read Online Character Theory Of Finite Groups I

$\{\text{GL}\}(V)$ is notation for a general linear group, and $\text{Aut}(V)$ for an automorphism group.

Representation theory of finite groups - Wikipedia

Read Online Character Theory Of Finite Groups I

The character: χ of a representation $\rho: G \rightarrow GL(V)$ of a group G on a finite-dimensional vector space V over a field F is the trace of the representation ρ , i.e. $\chi(g) = \text{tr}(\rho(g))$ for $g \in G$. In general, the trace is not a group homomorphism, nor does the set of traces form a group.
