Shrubs / RHS Gardening

How to plant shrubs: Dig a hole about twice the width and just as deep as the size of the container. Carefully remove the plant from the pot and loosen the roots with your fingers. Place the plant in the hole and backfill with the native soil that was removed, firming the soil into place as you go.

Complete Guide to Trees & Shrubs by Denny Schrock

Water containing fish waste provides plants with nutrients needed for their vigorous growth. In return, the plants take up excess nitrogen, providing purified water which goes back into the tank. To tell the whole story, I have to point out that there is a third crucial living community within an aquaponic system - the microbial community.
