## DC Motor EMI Suppression - X2Y Attenuators

DC Motors generally produce a lot of noise in an electrical system due to the excessive amount of EMI and RFI they generate. Some DC motors are designed with EMI in mind by selecting certain overlapping case materials to provide additional shielding. There are many

## Single Component Solution For Noise Suppression ... - X2Y

X2Y as an EMI filter for brushed DC motor 1) Introduction The X2Y component is a very effective way to reduce the noise generated by a brushed-DC motor. However, EMC is a vast subject and this two-page document does obviously not represent an EMC solution. It is just an example of implementation of EMI filter on power leads of a brushed-DC motor.

G2 (left Figure 1). A and B are connected across the power leads and G1 and G2 are attached to ground (right Figure 1). (For DC motors, ground would be the motor housing.) Figure 1. X2Y® made of ceramic (left).

Common-Mode noise filtering with low noise mode conversion. X2Y® components reduce EMI emissions far better than unbalanced discrete shunt capacitors or series inductive filters. Differential signal loss is determined by the cut off frequency of the single line-to-ground (Y) capacitor value of an X2Y®.

still leak through the plastic end-cap; so you can't use it as a substitution for component-based EMC suppression.

Conclusion. EMC is an important field in electronics with strict regulations, and DC motors and their circuits are significant sources of EMI.

AB-005 : Electromagnetic Compatibility (EMC / EMI) for ...

The most efficient way to silence the EMI is to use a ferrite core (semi-flattened cylinder or donut torus core) with both power leads to the motor separated and each having its wires wound around it (at least a few turns or more to form a common mode transformer.

**EMI Filtering.** EMI/RFI interference is either radiated or conducted over a frequency range of between several hundred hertz to several gigahertz. Radiated noise is generated by the voltage applied at varying levels to the wiring. To confine radiations in the motor housing, several precautions should be taken by manufacturers of brush dc motors.
