Read This! When designing an experiment, you need to consider three types of variables. The independent variable is changed by the experimenter by design. This variable is sometimes called the manipulate variable." The dependent variable is what changes as a result of the change in the independent variable.

Conclusion The overall results supported the hypothesis. A possible reason for this could be due to increased surface area of the wing in contact with the air - allowing for greater air support. Recommendations for Further Experimentation/ Practical Applications Increased time of descent due to greater wing length suggests that increased wing length could lead to greater fuel efficiency of ...
