Insights into Bariatric Surgery, Postoperative Care and ...

A direct effect of 3:HB and ketone bodies on insulin sensitivity has been already shown ; thus its rise in the early days after bariatric surgery might directly mediate glycemic control enhancement. As 3:HB is formed primarily when the energy source for the peripheral organs is shifted to lipid from glucose often during longer:term fasting, these alterations in metabolism at an early:stage postoperation may be a key factor in the success of longer:term postoperative glucose control.
