The relationship between religion and the state has entered a new phase ever since the Iranian Revolution more than three decades ago. The recent mass uprisings against autocratic rulers in the Arab world have highlighted the potency of Islamist forces in post-revolutionary societies in the region, a force arguably unlocked first by Iran's version of the 'spring' three decades ago. The economic ramifications of these uprisings are of special interest at a time when the possibility of the creation of Islamic states can have implications for their economic policy and performance again. A study of the Iranian experience in itself can offer rare insights whether for its own features and characteristics or for its possible lessons and implications for recent events in the region. This book is concerned with the economic aspects and consequences of the Iranian Revolution in general and its interaction with the international economy in particular. Many studies have to date dealt with Iran's economic challenges, policies and performance in the post-revolutionary period but its interaction with the international economy - although of growing importance - has not received sufficient attention. The contributions in this volume by experts in the field address ways in which in the span of three decades, Iran's economy has evolved from a strong aspiration to develop an 'independent economy' to grappling with debilitating international economic sanctions.

Seminar paper from the year 2020 in the subject Economics - Macroeconomics, general, grade: 4.5, University of Luzern, language: English, abstract: With my paper, I will illustrate the economic importance of the Strait of Hormuz for the world while giving a short update on the current political situation. Nevertheless, I will keep the focus on possible consequences of Iran closing the Strait, be it on an international or Iranian level. This analysis will be carried out based on recent research. Additionally, similar situations which occurred in the past, namely the conflict between the US and Iran in 1988, which culminated in "Operation Praying Mantis", can be used to predict the consequences of the closure of the Strait of Hormuz nowadays. Further on, I will construct two scenarios: one of further escalation and another one of de-escalation. Three indicators, that is the development of the price of Brent crude oil, numbers depicting Iranian GDP growth, and the Consumer Price Index will allow me to deliver a prognosis, on what effects each one of these scenarios might have for Iran as well as the global economy. The hypothesis, which is going to be reviewed in the conclusion of this paper, is the following: "A closure of the Strait of Hormuz would have serious consequences for the global economy."

This book provides a comprehensive overview of Iran's political economy since the 1979 revolution and examines the country's energy sector.

This book analyses the dynamics of economic reform in the Islamic Republic of Iran, discussing the internal debates and external factors that have influenced this post-revolutionary state's struggle to achieve the revolutionary goal of economic independence over the period 1979-2010.

Since the 1979 Iranian Revolution, the normalisation of relations between Iran and America has appeared unrealistic if not inconceivable, given that the Iranian state has vigorously pursued an anti-American ideology. This account of US-Iranian relations examines the efficacy of external pressure such as sanctions, as well as domestic grassroots reform movements within the Islamic Republic. The Obama presidency marked a rare high point in the Washington-Tehran relationship, as negotiations between the two countries and other powers produced an unprecedented nuclear deal, the Joint Comprehensive Plan of Action. However, the Trump administration's unilateral withdrawal from the JCPOA, and re-imposition of new sanctions in pursuit of 'maximum pressure', had devastating economic consequences, undermining the Iranian middle class, which has consistently been the voice of political moderation and supported Iran's integration into the global economy. Crucially, sanctions have also driven Iran further into the arms of China, while rendering it an even more recalcitrant and aggressive adversary. Monshipouri's central conviction is that negotiations are pivotal to dismantling the mistrust that has long characterised US-Iranian relations, and to seeking détente between Iran and its Arab neighbours--a critical priority, since gradual US withdrawal from the region is all but certain.

In the nearly thirty years following the Islamic Revolution, two opposing forces - an isolated conservative theocracy versus globalization - struggling to coexist, placed Iran in a precarious position to either move back toward the traditional ideologies that prompted such a radical transformation, away from the pressures, challenges and interdependencies created through globalization, or to participate more actively in the outside world. The religious establishment or ulama play the most significant role in the dichotomy between Iran's theocratic conservatism and the position Iran takes in

globalization. The modern history of Iran is replete with examples of the ulama actively participating in the political economy of the country, usually acting with their own interests in mind. Despite basing their actions within the theology and jurisprudence of Shi'a Islam, significant space exists with the principles of Islamic economic thought to allow the ulama in Iran to lead their country into the global economy. Yet the uncertainties and diffusion of power brought about through the processes of globalization keep the religious establishment from doing so in an effort to maintain their control over all Iranian institutions captured after the revolution.

Since the beginning of recorded history, Iran/Persia has been one of the most important world civilizations. Iran remains a distinct civilization today despite its status as a major Islamic state with broad regional influence and its deep integration into the global economy through its vast energy reserves. Yet the close attention paid to Iran in recent decades stems from the impact of the 1979 revolution, which unleashed ideological shock waves throughout the Middle East that reverberate to this day. Many observers look at Iran through the prism of the Islamic Republic's adversarial relationship with the US, Israel, and Sunni nations in its region, yet as Michael Axworthy shows in *Iran: What Everyone Needs to Know*, there is much more to contemporary Iran than its fraught and complicated foreign relations. He begins with a concise account of Iranian history from ancient times to the late twentieth century, following that with sharp summaries of the key events since the 1979 revolution. The final section of the book focuses on Iran today--its culture, economy, politics, and people--and assesses the challenges that the nation will face in coming years. Iran will be an essential overview of a complex and important nation that has occupied world headlines for nearly four decades.

These essays explore many of the key aspects of the globalisation process. The authors discuss how Muslim countries are coping with their encounters with globalisation and consider how the West is responding to Islam in the political sphere.
