Embryonic stem cells (ESCs) are arguably the most stable normal diploid cells that can be maintained in long-term culture. However, aneuploidies, and other chromosomal abnormalities have been reported to occur in both human, and mouse ESCs. Aneuploid mouse ESCs do not contribute to the germline in chimeric animals.

when results are obtained by manually counting cells using trypan blue and a hemocytometer. Cell counting with image cytometry and automated cell counters provides a solution to sources of error. The NucleoCounter® image cytometers count suspension cells, adherent and aggregated cells, enabling fast and precise cell measurement in situations where concentrations are challenging to estimate.
