which looks at the importance of monitoring the Earth's oceans.

Monitoring the Oceans from Space MOOC

Ocean current velocity can thus be computed from the slope of the ocean surface. Furthermore, as water heats up, it expands, and as it cools, it contracts, affecting the height of sea surface as well. Measuring the ocean surface topography thus gives the required information for studying global ocean circulation and the oceans heat budget.

Measuring The Oceans From Space

Scientists can use this measurement to calculate the distance between the satellite and the ocean surface in that particular location. Jason-3 orbits about 800 miles (1,300 kilometers) above Earth. Even from that far away, Jason-3 can measure the distance from itself to the ocean surface to within about one inch (about three centimeters).
