BASIC Stamp modules microcontrollers can be seen as small computers designed for use in a wide array of applications. Any embedded system project with some level of intelligence can use a BASIC Stamp module as the controller. There are two models of the BASIC Stamp, BASIC Stamp 1 (BS1) and BASIC Stamp 2 (BS2).

There are two ways of using microcontrollers in a project: Use a microcontroller board.

Integrate a microcontroller on your circuit board. This simplest way to get started is to use a microcontroller board. But it will be both cheaper, more compact and less messy if you integrate a microcontroller to your own board.
