The Multi Protocol Synchronous Serial Engine (MPSSE) is generic hardware found in several FTDI chips that allows these chips to communicate with a synchronous serial device such an I 2 C device, an SPI device or a JTAG device. The MPSSE is currently available on the FT2232D, FT2232H, FT4232H and FT232H chips, which communicate with a PC (or an application processor) over the USB interface.

The purpose of the MPSSE command processor is to communicate with devices which use synchronous protocols (such as JTAG or SPI) in an efficient manner. The FT2232x MCU Host Bus Emulation mode also uses the MPSSE technology to make the chip emulate a standard 8048/8051 MCU host bus. The MPSSE Command Processor unit is controlled using a SETUP command.
