The human nervous system has two parts: the central nervous system, which includes the brain and spinal cord, and the peripheral nervous system, which is composed of nerves and nerve networks throughout the body. The endocrine system is also essential to communication. The system utilizes glands located throughout the body that secrete hormones.

~~The Nervous and Endocrine Systems - Verywell Mind~~

The study of psychology and the endocrine system is called behavioral endocrinology, which is the scientific study of the interaction between hormones and behavior. This interaction is bidirectional: hormones can influence behavior, and behavior can sometimes influence hormone concentrations.

~~The Nervous System and Endocrine System | Introduction to...~~

The endocrine and nervous systems are key systems of the body that respond to changes in the internal and external environments. Though their outcomes can sometimes be similar, there are many...
