five distinct parts comprising of the cerebrum, diencephalon (thalamus & hypothalamus), brainstem, cerebellum and spinal cord. There is a complex interplay of signals which are transmitted amongst each component of the CNS to control consciousness, sensation, motor activity, autonomic nervous function and coordinate speech and movement"--Provided by publisher.

Brain injury is a worldwide leading cause of mortality and morbidity and requires early and appropriate management to minimize these adverse sequelae. Despite such needs, access to specialist centers is limited, forcing both immediate and secondary care of these patients onto generalist staff. These responsibilities are made more problematical by differences in patient management between and even within specialist centers, due in part to an insufficient evidence-base for

many interventions directed at brain injury. This book is borne out of the above observations and is targeted at emergency and acute medicine, anesthetic and general intensive care staff caring for brain injury of diverse etiology, or surgical teams responsible for the inpatient care of minor to moderate head trauma. Although explaining the various facets of specialist care, the book is not intended to compete with texts directed at neurosciences staff, but aims to advise on optimal care in general hospitals, including criteria for transfer, by a combination of narrative on pathophysiology, principles of care, templates for documentation, and highly specific algorithms for particular problems. It is intended that the content and structure can form the basis of guidelines and protocols that reflect the needs of individual units and that can be constantly refined. Our ultimate goal is to promote informed, consistent, auditable, multidisciplinary care for

this cohort of patients and we hope that this text contributes to that process.

Patients in the neurointensive care unit pose many clinical challenges for the attending physician. Even experienced clinicians occasionally arrive at the point where diagnostic, work-up, treatment, or prognostic thinking becomes blocked. Neurocritical Care is the next volume in the "What Do I Do Now?" series and provides the clinician with specific focus and insight on interventions in acute neurologic disorders. Neurocritical care in daily practice pertains to managing deteriorating patients, treatment of complications but also end-of-life care assisting families with difficult decisions. Written with a conversational tone and using a case- based approach, Neurocritical Care emphasizes how to handle comparatively common clinical

problems emergently.

Rapid response, assessment and management are crucial for neurocritical situations. Acute neurological illness is traumatic for patients and their families. Physicians caring for these patients are often under great distress and need to rapidly assess the situation to allow appropriate stabilization and management. *Emergency Management in Neurocritical Care* gives you the tools you need to perform under pressure in the neurocritical or emergency care unit. The no-nonsense approach corresponds to the attitude needed in both acute emergencies and in the neurocritical care unit. Packed with handy tips to improve your care of patients, and written by internationally renowned experts, the book covers: Acute Management of Neurological Emergencies Cerebrovascular Critical Care Infections of

combination of updated information for the practitioner, presented in easy-to-digest short chapters. With an essential clinical focus on key neuroanesthesia and neurointensive care knowledge, it is a practical guide for any practitioner of neuroanesthesia, beginner, occasional or experienced. The user-friendly format contains bullet points to ensure retention of important data, key points to summarize the take-home messages, suitable images to enhance understanding, and pertinent and appropriate references to allow for further exploration of the topics. This book is ideal for residents and others undergoing neuroanesthesia training. It is also a great tool for Operating Room nurses and other OR support workers, neurosurgical residents and neurointensive care professionals. This will also be a useful book to supplement knowledge for postgraduate fellowship and Board examinations.
