Six mantid species (*Sphodromantis viridis*, *Polyspilota aeruginosa*, *Hierodula unimaculata*, *Parasphendale agrionia*, *Mantis religiosa* and *Empusa pennata*) were studied in laboratory feeding experiments. Mantids stalk their prey and pounce on it, grasping it with their forelegs. Only living prey is selected and it is consumed directly after the catch. The predator orients itself optically, and ...

Recently, I completed work on my MA thesis which was entitled: A comparative investigation into the off-gassing properties of three brands of EVA and PVAc adhesives currently used in book conservation. Having worked previously in book and paper conservation labs, I understood that creating custom enclosures to house materials can be a large part of the job.

At the same time, a growing number of papers deal with the results of investigations into heat exchange in mini- and micro-channels. The research conducted by Yang and Webb (1997) [21] and Yan and Lin [22] confirmed that in comparable ranges of condensation parameters, the values of the heat transfer coefficient in mini-channels are higher, by at least 10%, than the values obtained in ...

In comparative investigations, scientists look for patterns or trends by comparing similarities and differences over time and under various circumstances. Identifying the boiling points of three different liquids, and using a hand lens to observe the external anatomy of 2 different insects are examples of comparative investigations.
