In *The Interpretation of Cultures*, the most original anthropologist of his generation moved far beyond the traditional confines of his discipline to develop an important new concept of culture. This groundbreaking book, winner of the 1974 Sorokin Award of the American Sociological Association, helped define for an entire generation of anthropologists what their field is ultimately about.

This book is a definitive reference source for the growing, increasingly more important, and interdisciplinary field of computational cognitive modeling, that is, computational psychology. It combines breadth of coverage with definitive statements by leading scientists in this field. Research in computational cognitive modeling explores the essence of cognition and various cognitive functionalities through developing detailed, process-based understanding by specifying computational mechanisms, structures, and processes. Given the complexity of the human mind and its manifestation in behavioral flexibility, process-based computational models may be necessary to explicate and elucidate the intricate details of the mind. The key to understanding

cognitive processes is often in fine details. Computational models provide algorithmic specificity: detailed, exactly specified, and carefully thought-out steps, arranged in precise yet flexible sequences. These models provide both conceptual clarity and precision at the same time. This book substantiates this approach through overviews and many examples.

The sterile insect technique (SIT) is an environment-friendly pest control method that fits into area-wide integrated pest management (AW-IPM) programmes. This book describes the principles and practice of SIT, frankly evaluating its strengths and weaknesses, successes and failures. SIT is useful against pests that have

considerable impact on plant, animal and human health, and criteria are provided to guide in the selection of pests appropriate for SIT.

Breastfeeding is a comprehensive clinical resource providing the information necessary to manage a nursing mother and child from conception through complete weaning. It will empower clinicians to provide thoughtful counseling and guidance to the breastfeeding family, stressing the importance of delivering care that is customized to each family's individual needs. The new fifth edition incorporates the latest information on infection, drugs in human breast milk, and human lactation. By utilizing scientific, evidence-based data, Breastfeeding is an indispensable reference for anyone whose patients include breastfeeding women.
