

Pollen Morphology Of Malvaceae And Its Taxonomic

If you ally compulsion such a referred **pollen morphology of malvaceae and its taxonomic** book that will offer you worth, get the categorically best seller from us currently from several preferred authors. If you desire to humorous books, lots of novels, tale, jokes, and more fictions collections are then launched, from best seller to one of the most current released.

You may not be perplexed to enjoy every books collections pollen morphology of malvaceae and its taxonomic that we will definitely offer. It is not approaching the costs. It's roughly what you compulsion currently. This pollen morphology of malvaceae and its taxonomic, as one of the most in action sellers here will categorically be in the middle of the best options to review.

Pollen Morphology of Egyptian Malvaceae: An Assessment of ...

Pollen grains of more than 120 species from c. 40 genera of Malvaceae were studied with light and scanning electron microscopy. The pollen grains are spiny, usually spheroidal and an evolutionary trend from a medium sized, ancestral 3-zonocolporate pollen type with small spines to a large polytrema type with long, sometimes distinctly dimorphic spines is recognised.

Pollen morphological studies in the Malvaceae: Grana: Vol ...

eral taxa (Ferguson 1986; Hildebrandt 1990; El Naggar 2002). Pollen morphology of Malvaceae or some of its representatives has been included in many studies: for example: Surova and Velieve (1984), Christensen (1986a, 1986b), Culham and Blackmore (1988) and El Naggar (2004). The pollen of Malvaceae is characterized by large size, spherical

Pollen morphological studies in the Malvaceae

Saba MD, Santos FAR. 2015. Pollen morphology and exine ultrastructure of selected species of Waltheria L. (Byttnerioideae-Malvaceae). Review of Palaeobotany and Palynology 221: 204-210. [Links] Saba MD, Santos FAR, Esteves GL. 2004. Palinotaxonomia das tribos Byttnerieae DC., Hermannieae DC. e Helictereeae DC.

Pollen morphology of Waltheria L. (Malvaceae ...

Due to the taxonomic importance of the Malvaceae family and the need for studies to corroborate the circumscription of the group, which remains uncertain, this study aimed to characterize the pollen morphology of the Bombacoideae species occurring in the state of Rio de Janeiro, which are distributed predominantly in areas of restinga (coastal woodland) and Atlantic Forest, in order to support taxonomic

studies of the group.

Pollen morphology of selected species of the subfamily ...

The pollen morphology of five species: *Waltheria albicans* Turczaninow, *Waltheria brachypetala* Turczaninow, *Waltheria cinerascens* Auguste Saint-Hilaire, *Waltheria martiana* Bentham ex J.G. Saunders, and *Waltheria viscosissima* Auguste Saint-Hilaire were studied by light microscopy (LM), scanning electron microscopy (SEM), and transmission electron microscopy (TEM), focusing on apertural type and exine. Pollen grains are medium to large, isopolar, oblate spheroidal to prolate spheroidal, 3(-4)-5 ...

Pollen morphology and exine ultrastructure of selected ...

Important Types of Malvaceae: 1. *Althaea rosea* (Fig. 38.5): Habit: Tall ornamental annual herb. Root: Tap, branched and annual. Stem: Erect, cylindrical, green, hairy, woody and solid. Leaves: Alternate, stipulate, petiolate, simple, palmate-lobed with a cordate base, multicostate reticulate venation. Inflorescence: Solitary axillary. Flower:

Malvaceae: Characters, Distribution and Types

Conversely, distinct pollen morphology was reported by Saad (1960) in Malvaceae and he observed distinguish morphological features between the genera. Also, this family was divided into six pollen categories; on the basis of aperture number and diameter, grain diameter and spine form (Culhane and Blackmore 1988).

Various Pollen Morphology in Hibiscus syriacus

The pollen grains are produced within the anther of the flower. Pollen mother cells originate from the sporogenous tissue of the anther which later divide meiotically to form four pollen grains called tetrad. The pollen grains do not remain united at maturity, and are dissociated into single pollen grain called monad.

Morphological Characteristics of Pollen Grains

The Malvaceae is generally characterized by large spherical pollen grains with an elaborate system of sculpturing. The species under consideration here are pantoporate with small apertures and conspicuous echinae or verrucae uniformly distributed over the surface of the grain.

Malvaceae - ScienceDirect

The pollen grains of *Althaea* genus are spheroidal, pantoporate, echinate which is characterized by having subglobose pattern at the base of echinae. The pollen of *Alcea* are spheroidal, pantoporate, echinate and baculate. Distances between pori are longer in *Althaea* (9.04-12.75 μ m) pollens than pollens of *Alcea* (5.12-7.28 μ m).

Pollen morphology of Alcea L. and Althaea L. genera ...

Pollen grains in Asteraceae family are relatively stenopalynous with less variation exhibited in the pollen morphology. Asteraceae pollens are mostly rounded triangular to square amb, sometimes circular in polar view and prolate in equatorial view.

Pollen Grains of Asteraceae and Analogous Echinete Grains

Malvaceae pollen is uncollectable for corbiculate bees which has previously been ascribed to pollen size, spines, and pollenkitt. We analysed the influence of pollen grain properties (diameter, spine length, spine density) on the collectability of echinate (spiny) pollen by bumble bees (*Bombus terrestris*).

Pollen grain morphology is not exclusively responsible for ...

Both species have pollen that is typical of Malvaceae (i.e., large, spherical, spiny, polypantoporate, tectate and the endexine as thick or thicker than the ectexine. *Malvaviscus arboreus* var. *mexicanus* has spirals of short, stout, irregularly branched primary spines and shorter, stout spinules spaced at irregular intervals.

Pollen Morphology of Malvaviscus arboreus var. mexicanus ...

of pollen types in the family Bombacaceae, it is stated in most taxonomic textbooks, old and recent ones, that the pollen grains of the Bombacaceae are smooth, the pollen of the Malvaceae being spiny (cf. for example Schultze-Motel [22, 311], Hutchinson [11, 522], and Cronquist [4, 201]). Saad [21], in a study on "The
