Neighborhood planning is urban development at a scale greater than household size but smaller than that of a city. In 1915, Robert E. Park and E. W. Burgess introduced the idea of "neighborhood" as an ecological concept with urban planning implications. Since then, many concepts and ideas of a neighborhood have emerged. Milton Kolter defines a neighborhood as, "...a political settlement of small territory and familiar association, whose absolute property is its capacity for deliberative ...

The concept of the neighborhood unit, crystallised from the prevailing social and intellectual attitudes of the early 1900s by Clarence Perry, is an early diagrammatic planning model for residential development in metropolitan areas. It was designed by Perry to act as a framework for urban planners attempting to design functional, self-contained and desirable neighbourhoods in the early 20th century in industrialising cities. It continues to be utilised, as a means of ordering and organising new
