The term "theory of meaning" has figured, in one way or another, in a great number of philosophical disputes over the last century. Unfortunately, this term has also been used to mean a great number of different things. In this entry, the focus is on two sorts of "theory of meaning". The first sort of theory—a semantic theory—is a theory which assigns semantic contents to expressions of a language.

The mentalist postulates that meaning in natural language is an information structure that is mentally encoded by human beings. This theory was the basis for conceptual semantics. It was developed by Ray Jackendoff and was aimed at explaining the nature of the conceptual element by which a person understands words and sentences.

Semiotic models: Ogden & Richards At the heart of Richards' theory of meaning is a device called the "semantic triangle". Each corner of the triangle corresponds to a component that is integrally involved in the process of meaning. Ogden and Richards argued that a major problem in human communication is a speaker's tendency to treat words as if they were things in reality. In other words, we ...

This article discusses theories of meaning. First, semantic theories are concerned with what the semantic value of a linguistic expression is. These are most basically characterized as theories of reference and/or semantic theories. Second, there are also foundational theories of meaning, which are concerned with how the linguistic expressions came to have their semantic values.

Semiotics (also called semiotic studies) is the study of sign processes (), which is any form of activity, conduct, or any process that involves signs, including the production of meaning. A sign is anything that communicates a meaning, that is not the sign itself, to the interpreter of the sign. The meaning can be intentional such as a word uttered with a specific meaning, or unintentional ...

Formal semantics seeks to identify domain-specific mental operations which speakers perform when they compute a sentence's meaning on the basis of its syntactic structure. Theories of formal semantics are typically floated on top of theories of syntax such as generative syntax or Combinatory categorial grammar and provide a model theory based on mathematical tools such as typed lambda calculi.

There are countless theories of meaning – almost as many as there are linguists; they are mainly of two types: 1. Semantic theories, which assign semantic contents to expressions of a language (propositions); and 2. Foundational theories of meaning, which enquire into why expressions have the semantic contents that they

Linguistic semantics is the study of meaning that is used for understanding human expression through language. Other forms of semantics include the semantics of programming languages, formal logics, and semiotics. Semantics is that level of linguistic analysis where meaning is analyzed.

~~The Different Theories of Semantics~~

The truth-conditional theory in semantics attempts to explain the logical meaning of sentences, treating a sentence as a logical proposition or basic statement which can be either true or false. It holds that if we know the conditions under which a particular sentence is true, we can infer the truth of related propositions.

As with general theories of meaning (see the entry on theories of meaning), two kinds of theory of word meaning can be distinguished. The first kind, which we can label a semantic theory of word meaning, is a theory interested in clarifying what meaning-determining information is encoded by the words of a natural language.
