People with fetal alcohol spectrum disorder (FASD) present challenges to those who work in the criminal legal system. Prenatal exposure to alcohol can cause physical, neurological, and psychological impairments. It is vital to understand the individual offender in order to address the underlying reasons for criminal

The challenge of fetal alcohol syndrome in the criminal ...

In addition to fetal death, one of the most tragic consequences of prenatal exposure to alcohol is when an infant is born addicted to alcohol and goes into withdrawal. Symptoms include extreme fussiness, tremors or shaking, feeding problems and diarrhea. The baby will need medical care and may spend the first several weeks of life in a hospital.

Prenatal alcohol exposure can lead to significant neurodevelopmental disabilities, now recognized as fetal alcohol spectrum disorders (FASD). This includes both fetal alcohol syndrome, a lifelong birth defect, and a wider range of enduring learning and behavior deficits often called alcohol-related neurodevelopmental disorder (ARND).

Fetal Alcohol and Drug Unit Secondary Disabilities Study: Fetal Alcohol Syndrome Follow-Up Project Principal Investigator: Ann Streissguth, Ph.D. Selected Publications. Streissguth, A.P. & Kanter, J. (Eds.) (1997). The Challenge of Fetal Alcohol Syndrome: Overcoming Secondary Disabilities (300 pp.). Seattle: University of Washington Press.

In the first book of its kind, experts describe how to help people with Fetal Alcohol Syndrome. A summary of recent findings and recommendations is presented by the team who conducted the largest study ever done on people of all ages with Fetal Alcohol Syndrome and Fetal Alcohol Effects. Twenty-one experts from the fields of human services, education, and criminal justice respond by describing their solutions to this problem of a birth defect that targets the brain and has lifelong consequences. Some of the most crippling secondary disabilities that people with FAS/FAE face include mental health problems, disrupted school experience, inappropriate sexual behavior, trouble with the law, alcohol and drug problems, difficulty caring for their children, and homelessness. This book acknowledges the diverse and multifaceted needs of people with FAS/FAE across the lifespan. It will be valuable for parents and the many professionals working with people with FAS/FAE.

The harmful consequences of alcoholism for the unborn child are still largely unknown. This book presents a detailed description of fetal alcohol syndrome as well as fetal alcohol spectrum disorders with respect to their clinical presentation, diagnosis, epidemiology, and pathogenesis. It also includes detailed considerations of underlying psychopathology, prevention, and therapy as well as the social consequences and impacts to patients.

It sounds simple: Women who drink while pregnant may give birth to children with defects, so women should not drink during pregnancy. Yet in the 20 years since it was first described in the medical literature, fetal alcohol syndrome (FAS) has proved to be a stubborn problem, with consequences as

serious as those of the more widely publicized "crack babies." This volume discusses FAS and other possibly alcohol-related effects from two broad perspectives: diagnosis and surveillance, and prevention and treatment. In addition, it includes several real-life vignettes of FAS children. The committee examines fundamental concepts for setting diagnostic criteria in general, reviews and updates the diagnostic criteria for FAS and related conditions, and explores current research findings and problems associated with FAS epidemiology and surveillance. In addition, the book describes an integrated multidisciplinary approach to research on the prevention and treatment of FAS. The committee Discusses levels of preventive intervention. Reviews available data about women and alcohol abuse and treatment among pregnant women. Explores the psychological and behavioral consequences of FAS at different ages. Examines the current state of knowledge about medical and therapeutic interventions, education efforts, and family support programs. This volume will be of special interest to physicians, nurses, mental health practitioners, school and public health officials, policymakers, researchers, educators, and anyone else involved in serving families and children, especially in high risk populations.

This book discusses and provides insight on the legal and ethical dilemmas of managing those with Fetal Alcohol Spectrum Disorder (FASD). This book provides a clear perspective for those clinicians and legal professionals who are working with those with this disorder, and correspondingly increases their understanding when arranging effective supports for this population. Historically, the primary focus on FASD has been on children. However, this is a lifelong disorder and the implications of this disorder become even more prominent and complex in adulthood. Those with this condition can struggle with impulsiveness, and a host of cognitive difficulties. This correspondingly impacts their independence and employability, and produces an elevated risk for homelessness and other residential issues, involvement in substance use, being exploited, development of behavioural issues, and subsequent legal difficulties. Their cognitive difficulties result in challenges for legal systems around the world to understand their issues, and to design appropriate remedial strategies, recommendations for treatments and supports, and even for understanding the failure of many of these individuals to be able to change their behaviours effectively. This produces various legal and ethical dilemmas, which are discussed in detail in this volume by 28 authors from Europe, New Zealand and North America. These include discussions regarding the rights of the unborn child, the alcohol industry 's duty to warn, whether small amounts of alcohol during pregnancy can be condoned, and even the current use of involuntary hospitalization for addicted mothers. Other chapters discuss the need for training on FASD for front line officers, use of lies during interrogation of those with FASD, medical and legal interventions for offenders with FASD, access to diagnostic services and follow-up supports, and whether FASD can be considered a mitigating factor for sentencing. Furthermore, caregivers also provide their stories regarding the daily dilemmas that are faced in raising those with FASD.

Understanding Fetal Alcohol Spectrum Disorder (FASD) is a useful introduction to the most common non-genetic learning disability, which is caused by alcohol consumption during pregnancy. Written by two FASD experts, it describes how alcohol can harm the foetus and disrupt development, and explains how FASD affects individuals at different stages of their lives. With the aid of simple, illustrative diagrams, photographs and charts, it shows how you can identify FASD and gives guidance on how mothers at risk can be helped. It also provides advice for parents or carers on how children, young people and adults with FASD can be best supported. Accessible and informative, this is the essential guide to FASD for social workers, family placement teams, child protection workers, foster carers, adoptive parents, midwives and teachers.

This widely used guidebook from expert Ann Streissguth explains how to identify and work with children and adults who have FAS and FAE and how to educate prospective mothers and society at

large about this entirely preventable disorder.

Fetal alcohol spectrum disorders (FASDs) have emerged as a major phenomenon within the education, health, criminal justice and social care systems of many countries, with current prevalence figures suggesting that one in a hundred children and young people have FASDs. In this publication, academics, professionals and families from around the world have shared expertise and insights on FASDs. Their combined interdisciplinary perspective makes an invaluable contribution to how we understand and address the complex social, educational and health needs associated with this growing group of children and young people. Articulating fundamental knowledge, cutting edge initiatives and emerging trends in FASDs, this book provides an evidence base that will enable services to identify and respond to the need for action on FASDs. It recognises that families – natural, foster or adoptive – are at the heart of this process, and that their rich knowledge base, grounded in their lived experience, is crucial. Any education, social care, criminal justice or health professional working with children and young people with FASDs and their families will find this book a seminal and authoritative resource.
