The Fate of the Species. "A false sense of security during the summer months in northern states such as New York and Michigan, where the virus might be less active during the summer heat, could lead to a spike in cases in the autumn or winter that's even more severe than the one we're only now recovering from."

Scientific American executive editor Guterl begins by discussing mass extinction, a process that has occurred half-a-dozen times over life's 2.5-billion-year history, eliminating up to 90 percent of species. The survivors thrived, and the current mass extinction (already in progress) may not eliminate the human species, but the consequences will be dismal.

~~THE FATE OF THE SPECIES | Kirkus Reviews~~

In the history of planet earth, mass species extinctions have occurred five times, about once every 100 million years. A "sixth extinction" is known to be underway now, with over 200 species dying off every day. Not only that, but the cause of the sixth extinction is also the source of single biggest threat to human life: our own inventions.

The Arabian Oryx was declared extinct in the 1970's, but a united effort managed to reintroduce the species to the wild from captive populatons. Though an enforcement effort protected the species from poachers, rangers can do nothing to defend the species from the drought and overgrazing that threaten to eradicate the species as a result of climate change.

In addition to bird species, four-legged, grounded animals face a similar fate. The Peninsula bighorn sheep, which roam hundreds of square miles and seasonally migrate through the U.S.-Mexico border, are just one such species that Stanford biologist Rodolfo Dirzo said in a university Q&A could be "genetically doomed."
