phase | Definition & Facts | Britannica

Thermodynamics is a branch of physics that deals with heat, work, and temperature, and their relation to energy, radiation, and physical properties of matter. The behavior of these quantities is governed by the four laws of thermodynamics which convey a quantitative description using measurable macroscopic physical quantities, but may be explained in terms of microscopic constituents by statistical mechanics. Thermodynamics applies to a wide variety of topics in science and engineering, especial

Thermodynamics - Wikipedia

In the physical sciences, a phase is a region of space, throughout which all physical properties of a material are essentially uniform. Examples of physical properties include density, index of refraction, magnetization and chemical composition. A simple description is that a phase is a region of material that is chemically uniform, physically distinct, and mechanically separable. In a system consisting of ice and water in a glass jar, the ice cubes are one phase, the water is a second phase, an

There are various thermodynamic variables one can use to describe matter in thermal equilibrium, some of the common ones being: mass or number density ρ , energy density e , temperature T , pressure P , and chemical potential μ (assuming for simplicity that the material is composed of one pure substance, not a mixture such as brass).

Definition of Thermodynamic Phases and Phase Transitions

Therefore, we review some aspects of equilibrium phase-change thermodynamics in order to clarify how intermolecular forces dictate the state of matter of a material. It is convenient to start with the reduced van der Waals equation of state: (17)

Thermodynamics and Phase Equilibria This course, based on MATSCI 204 Thermodynamics and Phase Equilibria, introduces learners to thermodynamics and how it governs phase equilibria. It is intended for a general audience, and is especially useful as a preparatory course for undergraduate and graduate students who are about to take their first class in thermodynamics.
